Other Interests

Engagement In the Ornithology Community

I maintain a close connection with the ornithology community by taking classes and contributing to various ornithological programs, such as:

Spring Field Ornithology (scholarship awarded)

Cornell Lab of Ornithology

Students attend weekly talks on bird identification and conservation and engage in weekly bird walks throughout upstate New York. For this course I won a working scholarship where my tuition fees were partly covered in exchange for some work during the course. More information [here](#)

Techniques of Avian Specimen Preparation

Cornell University Ecology and Evolutionary Biology department

Course members learn to prepare bird skins for research purposes. I also participated in a reading group made up of select members of the class which investigated the ethics of bird collection. More information [here](#)

Birds of Maine Islands: A Service Learning Week (formerly 'Maine Seabird Biology and Conservation')

The Audubon Society

Participants engaged in conservation volunteer work on Hog Island off the coast of Maine. The course was and involved activities such as cleaning up beaches to maintain bird habitat and creating decoys for repopulation efforts. More information [here](#)

Arts and Birding Summer School (scholarship awarded)

The Audubon Society

Participants attended classes focused on the artistic recording and documenting of birds while in the field. Takes place on Hog Island off the coast of Maine. I was awarded a \$500 scholarship from Audubon for this class. More information [here](#)

Scientific Illustrations

I also have a keen interest in the arts. I hold an art foundation degree from Manchester Metropolitan University and I have produced scientific illustrations for the following bird-related courses. You can see some of these illustrations on my website.

Ornithology Online

Project Puffin

Project Puffin Online

Project Puffin

Seabirds of the World

Cayuga Bird Club

Puffin Island

Project Puffin

Spring Ornithology

Cornell Lab of Ornithology

Raptor Rapture

The Audubon Society

I am also a member of the International Puffin Congress, a collection of scientists, conservationists, and others involved in puffin conservation. The congress was created with the aim of creating dialogue across disciplines and raising public awareness about puffin conservation efforts and needs.

Fiber Arts

I love to sew and quilt. I have sold some of my quilting patterns under the name 'Beneath the Brambles.' I have also taught quilting and needlework classes

Dissertation Abstract

In my dissertation, I develop and apply the notion of *inference webs*. Inference webs are structured entities which form part of the collective epistemic resources of an epistemic community. They underwrite tacit inferential moves (including association and common use) which allow us to move from one concept to another fluidly and without stating or considering that move explicitly. Inference webs are indispensable to our epistemic practices – they allow us to talk about issues on which we have agreed-upon assumptions and standards, without having to state those all those assumptions explicitly (which would take a huge amount of time and effort) – but they can go wrong, and when they do they hide important, problematic, tacit assumptions which (i) lead our theorising astray, and (ii) often mask ethically suspect or outright wrongful assumptions. Indeed, the tacit nature of pathological inference webs often leads us to make inferential moves that we would reject if confronted with explicitly.

My dissertation is divided into three papers, one on Feminist Epistemology, one on Philosophy of Science, and one on Analytic Metaphysics. Details of each follow below.

Feminist Epistemology

I argue that epistemic injustice can arise as a result of prejudiced and harmful defects in the inferential webs of both scientific practice and everyday thinking. Drawing on lessons from the Philosophy of Science, I posit that the inferential webs underlying our epistemic practices can be prejudiced and wrongful, leading to a variety of epistemic injustice that I call *inferential injustice*. This type of injustice is fully structural; it inheres in our epistemic practices themselves rather than as a direct result of an individual's actions or explicit beliefs. For this reason, cases of inferential injustice are importantly different from previously described cases of epistemic injustice and are especially hard to track. We need a better understanding of inferential injustice so that we can avoid and ameliorate cases such as the ones I presented in the dissertation. I begin this work (the work of exposing and interrogating pathological inference webs within a certain discipline) in my research on the literature on mental illness (see below).

Philosophy of Science and Social Metaphysics

I argue that the mental illness literature operates under a problematic inference web whereby legitimate principles are imbued with empiricist assumptions that cause them to go awry. For example, the pathological inference web underlying the mental illness literature cause philosophers within that literature to assume (or at

least make inferences which assume) that the social and the scientific are fundamentally distinct. Most philosophers of science will deny this principle if asked directly, and yet that same principle is operative behind many of the inferences that are routinely made in the literature. I think that similar kinds of moves are made tacitly in the literature on kinds, and I hope to develop this thought further as part of my ongoing research (see below for more on this).

Analytic Metaphysics

My interest in the metaphysics of kinds is part of a broader interest in analytic metaphysics generally. I develop a view that fits more squarely in the realm of formal metaphysics of modality. There, I offer a Lewis-friendly solution to the 'problem of advanced modalizing.' You get an advanced modal if you take the sentence 'there are many possible worlds' and add 'possibly' to the beginning of it. Since the Lewisian thinks that 'there are many possible worlds' is true, she should also think that 'possibly, there are many possible worlds' is true; after all, anything that is true must be possibly true. But 'possibly there are many possible worlds' translates (via Lewis' translation schema) into 'there is a possible world in which there are many possible worlds.' This last sentence must be false for the modal realist, since according to her worlds are spatiotemporally isolated from one another. I argue that the problem of advanced modalizing arises because of a misunderstanding about the reductive component of Lewis' account. I argue that we ought not require, as a necessary condition of successful reduction, that we can locate the reduced property (i.e. modality) in the reductive base (possible worlds).

As noted above, I think that the notion of an inference web has applications that go far beyond what I do in my dissertation. For example, I think that inference webs also play a role in the literature on the metaphysics of kinds. In many literatures, it is common to move (implicitly) from the concept 'natural' to the concept 'not social', from the concept 'socially constructed' to the concept 'unreal'/'unscientific', and from the concept 'value-laden' to the concept 'not objective.' These moves are illegitimate, and clearly so (whether a river has flooded in a certain area is a socially constructed matter, and yet it is clearly an appropriate matter for scientific study), and yet they are made routinely in many literatures. I think that this is due to the residue of tacit empiricist assumptions which are a hangover from the historical literature in the philosophy of science. Importantly, the inferential moves that are made here would be rejected outright by the people who make them, and hence cannot be explained by reference to faulty beliefs (these people do not *believe* that something's being socially constructed implies that it is unscientific). We need to notion of inference webs to thoroughly explain and identify this phenomenon. I did not develop this argument in my dissertation.
